

MALLACOOTA 2020

Envirowalk was contracted to supply our FRP Mini-Mesh panels and Mini-Mesh **EnviroTreads** for this project in beautiful Mallacoota as part of the 2019-2020 Bushfire recovery program.

Despite the beauty of the surrounds and glorious views, the coastal environment is one of the harshest and most challenging and it is crucial to install products that will endure for decades yet have high anti-slip while still remaining comfortable for bare feet and safe against the risk of serious abrasions to young children who might run and fall over.

To meet these challenges, all Envirowalk FRP EnviroGrate and **EnviroTreads** are manufactured using only premium grade, unblended Type I (Iso) resin with ATH filler, maximum anti-UV, E-Glass fibres and fine grit P5 rated anti-slip surface.

This combination of raw materials is essential for outdoor applications – especially in a coastal environment.

Envirowalk PRODUCTS USED:

H30 (30mm thick) Mini-EnviroMesh Type I resin, 10g UV9, ATH filler, E-Glass fibres with fine carborundum barefoot friendly grit anti-slip surface.

H40 (40mm thick) Custom made Mini-Mesh EnviroTread Type I resin, 10g UV9, ATH filler, E-Glass fibres with fine carborundum barefoot friendly grit anti-slip surface with pultruded angle anti-slip safety nosing bonded into leading edge.
